

HIGHTEC ATF CLEANER / AUTOMATIKGETRIEBEREINIGER

Fast acting automatic transmission cleaner for all automatic transmissions. Cleans the entire oil system and loosens sediments just before the oil change.

Description

HIGHTEC ATF CLEANER is a highly-effective additive composition that cleans the oil circulation and inside of the automatic transmission. By removing the soiling, the transmission and the new transmission oil remain clean for longer. HIGHTEC ATF CLEANER is suited for all automatic transmissions with or without torque converter lock-up clutch. It is used for difficulties with gear changes or switching shocks, starting weaknesses, plucking torque converter lock-up clutches, kick-down problems, vibrations, and unusual transmission noises. It is also used after repairs to defective heat exchangers to remove coolant residue.

Application

Add HIGHTEC ATF CLEANER to the gear oil approx. 15 minutes before the planned oil change. Then drive the vehicle for 15 minutes. In doing so, use all gears, including the reverse gear. Then perform the oil change as usual.

Advantages

- universally applicable - suited for all automatic transmissions
- dissolves internal soiling
- reduces contamination of new gear oil by old sediments
- highly-effective additive composition
- simple and fast application
- improves the friction coefficient performance of switching elements
- cleans control valves, thereby improving their function
- protects against wear caused by sediments

Notes

- Not suited for direct shift gearboxes (DSG, DCT, etc.), continuously variable or manual transmission!
- One can (designation) is suitable for up to 8 liters of gear oil.
