

HIGHTEC RUST OFF SPRAY

Description

HIGHTEC RUST OFF SPRAY rust remover is a fast-acting rust remover with pronounced creeping properties. Even very tight screws and nuts can be loosened again within a short time. The formulation penetrates deep into narrow gaps, infiltrates corrosion layers and effectively loosens them through capillary action. Even heavily rusted connections are reliably made flexible again. At the same time, dirt is loosened and additional corrosion protection is built up thanks to water-displacing properties. The rapid penetration significantly reduces friction between the components and makes loosening easier in the long term.

Application

Shake can thoroughly before use. Apply directly to rusted or stuck parts from a distance of 15-20 cm. Allow to act for 2-10 minutes, depending on the degree of corrosion. Then move or dismantle the component. Reapply if necessary. Remove excess with a clean cloth. Fold-out spray tube ensures precise spraying and dosing.

Advantages

- Excellent creeping properties
- Neutral towards plastics and rubber components, as well as paints
- Fast-acting & high dissolving power
- Low coefficient of friction
- Provides corrosion protection

Recommendation

Application for tight-fitting screw connections
